

SMART NUMBER GUESSING GAME

~By V.B.Kumar

ABSTRACT

- A console-based game using C with random number generation, hints, scoring, and file handling.
- Application is designed with multiple difficulty levels.
- For this the concept included are control structure, functions, arrays, random number generation, and file operations.

INTRODUCTION

- An interactive game where users guess a system-generated number with hints and difficulty levels.
- The primary objective of this project is to demonstrate the building of a user friendly game environment.

ALGORITHM

- 1. Start
- 2. Input name
- 3. Choose difficulty
- 4. Generate number
- 5. Guess loop
- 6. Check result
- 7. Save score
- 8. End

FLOWCHART

- Start → Input → Menu → Guess Loop → Check → Save
→ End

METHODOLOGY

- Modular approach using functions, file handling, loops, and conditions.

RESULT

```
Output
^ === Number Guessing Game ===
Guess a number between 1 and 100
Enter your guess: |
```

```
Run Output
^ === Number Guessing Game ===
Guess a number between 1 and 100
Enter your guess: 96
Too High!
Enter your guess: 48
Too Low!
Enter your guess: 66
Too Low!
Enter your guess: |
```

```
Output
^ === Number Guessing Game ===
Guess a number between 1 and 100
Enter your guess: 96
Too High!
Enter your guess: 48
Too Low!
Enter your guess: 66
Too Low!
Enter your guess: 85
Too High!
Enter your guess: 77
Correct! You guessed in 5 attempts.

=== Code Execution Successful ===
```

CONCLUSION

- Project demonstrates C programming concepts and provides interactive gameplay.
